

Different Files for Package Specification and Body

Posted by mouhanad_agramli - 2010/08/19 13:31

Hi,

In my work place we create two different files for package specification and body. The extensions for those files are .PKS (for specification) and .PKB (for body). Unfortunately, DreamCoder for Oracle does not support that. I would like to request this feature please.

Thank you,

-Mouhanad S. Al-Ramli
