

Cannot connect to mySql - Unknown database

Posted by konechka - 2010/01/03 21:05

I just downloaded the DreamCoder for MySql 5.0 for Windows, installed it on Windows XP and tried to connect to mySql which runs on Linux.

DB version: 5.1.37

OS version (where mySql is installed): Ubuntu Linux 9.10

Connection: remote.

I have created user permission for the remote access.

Also I have set MySQL server listening address to ANY.

Server port is 3306.

Error message:

1049

#42000Unknown database 'duken'

I am typing correct database name ("Duken") but the error message says it is unknown with small letters ("duken").

How do I connect to this? <http://www.sqldeveloper.net/images/fbfiles/images/error.JPG>
