

## MySQL database the records of which are in Greeks

Posted by mail-question - 2009/10/07 08:45

---

I have built a MySQL database the records of which are in Greeks. Unfortunately I can not see any greeks in the records. Instead I only seen meaningless chars which make no sense. Could anyone help with the display of greeks within the data? Thanx a million.

Question from : Ni Angel

Hi,

If you have a greek characters but you not use a windows with a Greeks charset, you need to choose the client and font charset greek in the database connection.
