Question from : Yu, Youyi

Hello yu,

The message is generated when the DreamCoder for Oracle not locate the OCI.dll on the computer when you try to and a new account in the register manager.

Solution 1 :

DreamCoder for Oracle not need a Oracle client to stablish the connection, you can use the TCP-IP direct connection.

[http://www.sqldeveloper.net/images/fbfiles/images/oracle\\_without\\_oci.png](http://www.sqldeveloper.net/images/fbfiles/images/oracle_without_oci.png)

With this option you can stablish a connection to the Oracle database server without OCI client, this is the best way to a quick access to the database.

Solution 2 : You can try to install the Oracle Client in your computer.
