

Describe function

Posted by Batter - 2010/05/20 10:54

Recently i have downloaded DreamCoder free, and it's disappointing a bit:

- why SQL*Plus command doesn't work? (describe
- why program recognizes DBlinks as email address on CTRL+Click?
- i haven't found hot keys for creating new SQL Editor - that's not user friendly
- when you run script i just may hang, just stop button active, if i press it and again F9 - nothing happens
- no separate button for exporting grid - that's not user friendly
